

Meet Shield, the next chapter of email security, where protection meets productivity.

In a world where we spend too much time on email, Shield steps in as more than just another filter. This is three products in one... combining intelligent inbound and outbound email protection with privacy and productivity features. Shield utilizes a zero-trust approach to stop all threats and noise, while user feedback continually trains underlying AI models to bring you the most personalized, secure filtering available.

Protection

Blocks spam/viruses/phishing with zero-trust security at the core.

Privacy

Blocks trackers, hides your identity, and lets you lock sensitive inbox content.

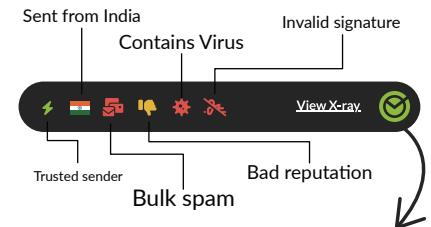

Productivity

Email bundles (with AI generated summaries) create a noticeably calmer inbox.

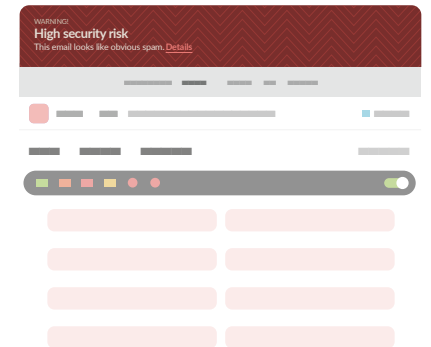

A Heads Up Display (HUD) in every email so you can be 100% sure your email is safe.

Stop wracking your brain trying to figure out if the sender of an email is legitimate or not. Shield puts a heads up display at the top of every email. The HUD gives you instant visibility into buried insights, so anyone can confidently assess a message's safety.

Gives your inbox X-ray vision.

From the HUD, you can jump straight from any email in your inbox to X-ray for a more in-depth message analysis. X-ray lets you see way beyond the external details of a message, so anyone can get the information they need to decide for themselves if it's safe to interact with. This gives users a safe place to preview a message in a sanitized environment. No admin assistance required!
