

From Assumed Trust to Zero Trust

For decades, email security has operated on a fundamentally flawed assumption: trust first, filter second. Shield takes a radically different approach, starting with zero trust and making every email earn its place. The result? The strongest defense possible with the calmest inbox you've ever had.

Proactive Defense

By questioning everything, Shield catches emerging threats before they reach users.

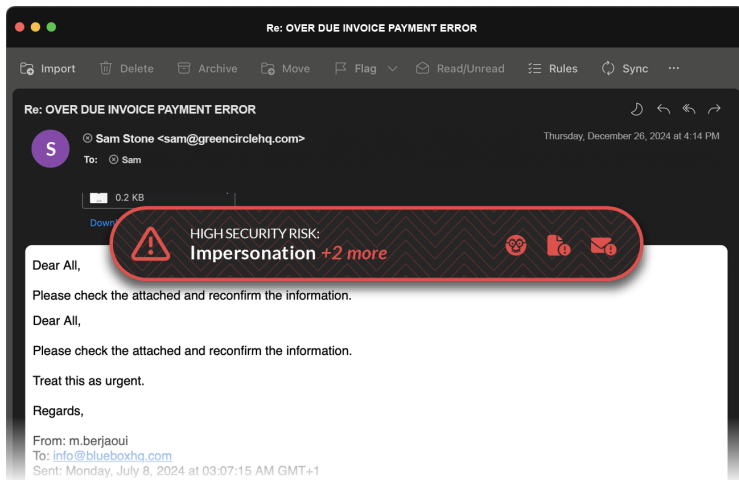

Personalized Protection

Our AI engine learns your unique patterns to deliver only the safe emails you want.

Seamless Experience

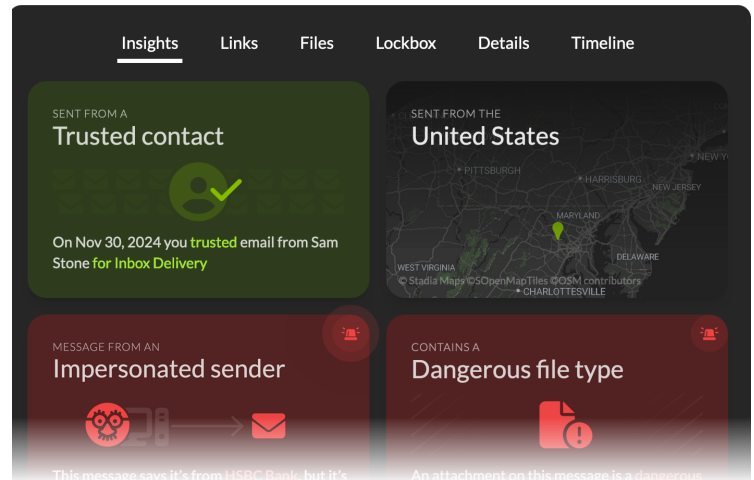

Shield works invisibly behind the scenes. Just use your email as you normally would.

HEADS-UP DISPLAY

Dynamic security insights, *never static banners.*

Using clear color signals, the HUD shows real-time security insights to help you feel more confident with good messages and more careful with suspicious ones. From the HUD, you can jump straight into X-ray for a more in-depth analysis.

X-RAY

Security findings *made human.*

X-ray is the world's most secure email client, letting you safely preview any message while revealing what's happening behind the scenes. See inside each email to understand its true security story, explained in plain English so you can make confident, informed decisions.

Capabilities you won't find anywhere else:

- Zero trust foundation
- Adaptive intelligence
- Multi-layered threat defense
- Works on any email client
- Bundles for focus
- Stops ALL unwanted email
- No MX record changes
- Deploys in 60 seconds
- Find any email, anywhere, fast
- Lock sensitive messages in the inbox
- Temporary use "burner" addresses
- *And much more...*
