

From Assumed Trust to Zero Trust

For decades, email security has operated on a fundamentally flawed assumption: trust first, filter second. Shield takes a radically different approach, starting with zero trust and making every email earn its place. The result? The strongest defense possible with the calmest inbox you've ever had.

Effortless Security

Shield is always on, but never in the way. It's zero trust, without the friction.

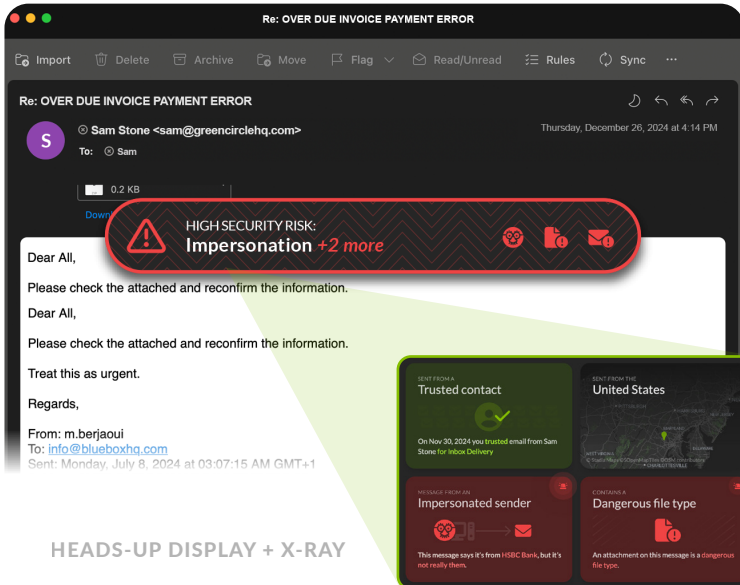

Personalized Protection

Our AI engine learns your unique habits to deliver only the safe emails you want.

Complete Control

See and act on every email from the gateway to the mailbox in a single platform.

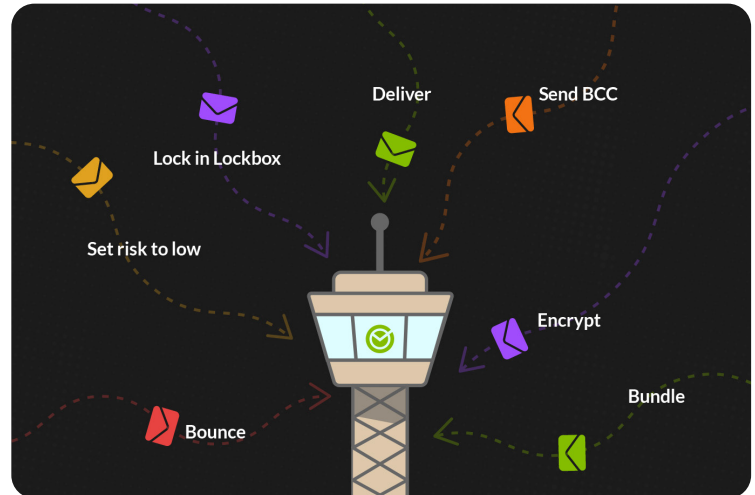

HEADS-UP DISPLAY + X-RAY

Security findings made human.

Most tools bury findings in jargon or static banners. Shield makes them clear. The HUD uses color signals and icons to flag risk in real time, and X-ray gives a safe, detailed preview of any message. Plain-English insights turn confusion into confident decisions every time.

Capabilities you won't find anywhere else:

- Zero trust foundation
- Personalized intelligence
- Gateway + inbox control
- Context-aware routing
- Rapid deployment
- No MX changes
- Any email client
- Edge-to-inbox visibility
- Inbox focus controls
- Sensitive message locks
- Temporary burner addresses
- Trusted sender address

EMAIL TRAFFIC CONTROL (ETC)

Every inbox needs a control tower.

Where others stop at block or allow, Shield's new orchestration layer puts you in charge. Build code-free workflows in minutes with smart triggers that understand tone, context, and behavior. Then direct every message with real-time actions anywhere along the email journey.
